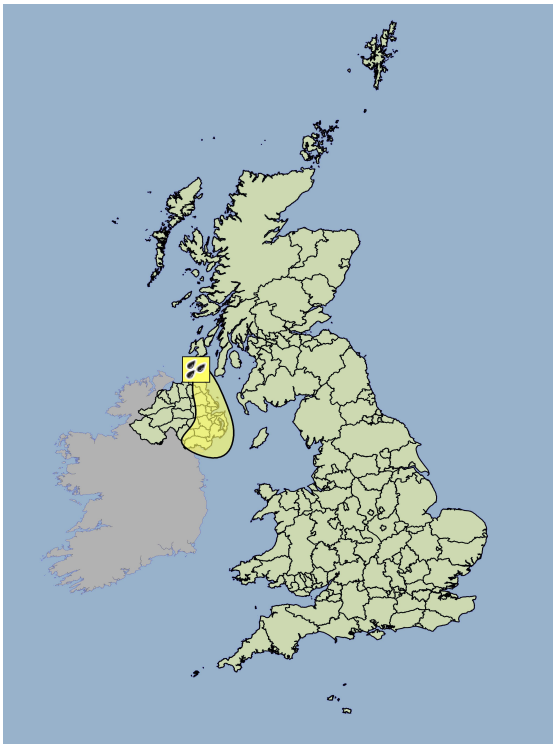
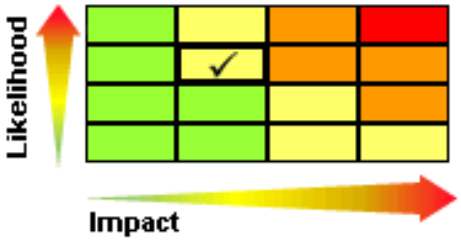
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of low pressure will develop just to the northwest of Ireland on Sunday night as warm air from the south and cold air from the north collide. This will push a band of heavy rain across Northern Ireland during Sunday night and Monday morning with the largest accumulations over the eastern counties. 20-30 mm may fall in a short period of time with around 50 mm possible over the Mourne and Antrim mountains higher ground leading to standing water and surface water flooding in places. This may be exacerbated by windblown debris reducing drainage.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:00 on Mon, 06th Oct 2014** until **08:00 on Mon, 06th Oct 2014**

An area of heavy rain accompanied by strong winds will move eastwards across Northern Ireland during Sunday night and Monday morning.
The public should be aware of the risk of surface water flooding and some disruption to travel, especially where drainage is reduced by fallen leaves.
